

This step-by-step plan gives an idea of how you could grow with the Hydro-Pack. It is only a guideline, there are many ways to grow.

TRY-PACK™ HYDRO

Try-Pack™ Hydro combines the best of two worlds: organic quality and hydroponic quantity. It stimulates optimal root development and organically protects the growing plants in your hydro system. The Hydro-Pack is designed to be easy to handle and makes it simple to gain experience using the Biobizz® range of organic fertilizers - that are suitable for any hydroponic system.

If you're growing for the first time, just stick with the products in this pack. Get experienced, learn to understand the plants and keep it simple. When in doubt, go easy. The second time you can add the products we mention as optional. Results may vary since every plant and their environmental conditions are different. For more information, go to www.biobizz.com.

NUTRIENT SCHEDULE

*Open the card to see how to hatch the seeds!

BIO-BLOOM™

ORGANIC FERTILIZERS

- ✓ For exuberant flowers that lead to tasty fruits
- ✓ Optimum blend of nitrogen, phosphorous and potassium
- ✓ An independently working fertilizer
- ✓ Trace elements included

TOP-MAX™

ORGANIC STIMULANTS

- ✓ Flowering strengthener (size and weight)
- ✓ Improvement of nutrient uptake
- ✓ Sweeter, smooth tasting crops

BIO-HEAVEN™

ORGANIC ENERGY BOOSTER

- Energy booster
- Improves moisture retention
- Stimulates enzymatic activity and fast nutrient absorption
- Gets rid of toxins

 Wash your hands at every step

*Before nutrient schedule
**Start with nutrient schedule

HATCHING THE SEEDS*

-  Put the seeds in water. After 24 hrs., the seeds sink to the bottom.
-  After this, put the seeds in a wet paper towel and store the seeds in a warm and dark place for 24 hrs. again.

-  Now the seeds will have little roots. Put the seeds with the roots down in Light-Mix®, make a hole of 1 cm. deep and cover it with a bit of soil.
-  Moisturize the soil and provide appropriate light and warmth.
-  For two weeks give only water.

 **TIP!** You can also use Coco-Mix™, Jiffy or Root-Plug for seeds. **Don't use All-Mix® for seedlings!**

 **TIP!** Add a few drops of Root-Juice™, Acti-Vera™ or Alg-A-Mic™ in the feeding water after you've put it in Light-Mix®.

VEGETATIVE PHASE**

-  Your seedling is now about 10-15 cm. high and has 2-4 leaves.
-  You can start with Bio-Heaven™, 1-2ml per liter, for All-Mix® and Light-Mix® users.
-  If you want to switch to All-Mix®: this is the time to replant!
-  Water your plants 1-3 times per week. Remember: a bit less water is always better than too much.

 **TIP!** To check if your plant is thirsty: put your finger in the soil, if it sticks, you don't have to water yet. If you want to know exactly when you should water: buy a soil humidity meter.

FLUSHING

-  In this period, you feed with just water. Stop using Biobizz® products.
-  **If you choose one week of flushing:** water your plants till run-off, 3 times a week. You are basically 'washing' the soil.
-  **If you choose two weeks of flushing:** water with the normal amount of water, like you've done in the weeks before, 2-3 times a week.
-  The leaves of your plants might turn yellow. This is normal, so don't panic.

FLOWERING PHASE

On soil

-  Use Bio-Heaven™, Bio-Bloom™ and Top-Max™ as indicated in our nutrient schedule.
-  Use Biobizz® nutrients every time you water the plants, up to 1-2 weeks before harvest.

 **TIP!** Add Bio-Grow® or Fish-Mix™ as well. Follow the dosages as indicated in our nutrient schedule.

FLOWERING PHASE

On hydro/aero

-  Use a Hydro -or- Aeroponic A+B nutrient as a basis. Always follow the Ec and pH instructions of the producer of these nutrients.
-  From the 4th week of flowering, add Bio-Bloom™, Top-Max™ and Bio-Heaven™ as indicated in our nutrient schedule for Light-Mix®.
-  Clean your tank/reservoir before using Biobizz® products for the first time. Hygiene is crucial when using organics on hydroponics.
-  **19 to 20°C** Keep the water at 19-20°C. The mixture in your reservoir will remain steady for 4-6 days.
-  Always check the pH levels. When it starts to fluctuate, refresh the reservoir. Co³ tabs can help to keep the pH level constant.
-  Use the Hydro-Pack products until the bottles are empty or at least one week before harvest.

HARVEST

You did it! Time to enjoy some genuine organic quality!
