

This step-by-step plan gives an idea of how you could grow with the Indoor-Pack. It is only a guideline, there are many ways to grow.

TRY-PACK™ INDOOR

If you're into the idea of indoor cultivation but not sure how to start, try the Indoor-Pack. It is designed to be easy to handle and makes it simple to gain experience using the Biobizz® range of organic fertilizers. To make it even easier, we've created this plan.

If you're growing for the first time, just stick with the products. Get experienced, learn to understand the plants and keep it simple. When you grow for a second time, add the products we advise as an option. Results may vary since every plant and their environmental conditions are different. When in doubt, go easy. Try out what is best for you to get amazing results! For more information, go to www.biobizz.com.

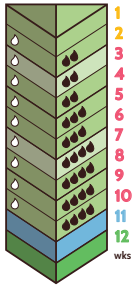

NUTRIENT SCHEDULE

**Open the card to see how to hatch the seeds!*

BIO-GROW®

ORGANIC FERTILIZERS

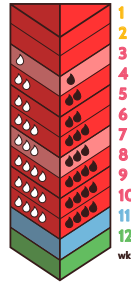

- ✓ Base product to stimulate growth
- ✓ Derived from 100% organic sugar beet extract
- ✓ A rich food source for soil microbes
- ✓ Vitamines B1, B2, C and E

BIO-BLOOM™

ORGANIC FERTILIZERS

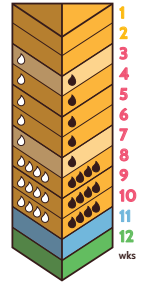

- ✓ For exuberant flowers that lead to tasty fruits
- ✓ Optimum blend of nitrogen, phosphorous and potassium
- ✓ An independently working fertilizer
- ✓ Trace elements included

TOP-MAX™

ORGANIC STIMULANTS

- ✓ Flowering strengthener (size and weight)
- ✓ Improvement of nutrient uptake
- ✓ Sweeter, smooth tasting crops

Wash your hands at every step

**Before nutrient schedule
**Start with nutrient schedule*

HATCHING THE SEEDS*

1

Put the seeds in water. After 24 hrs., the seeds sink to the bottom.

2

After this, put the seeds in a wet paper towel and store the seeds in a warm and dark place for 24 hrs. again.

3

Now the seeds will have little roots. Put the seeds with the roots down in Light-Mix®, make a hole of 1 cm. deep and cover it with a bit of soil.

4

Moisturize the soil and provide appropriate light and warmth.

5

For two weeks give only water.

TIP! You can also use Coco-Mix™, Jiffy or Root-Plug for seeds. **Don't use All-Mix® for seedlings!**

TIP! Add a few drops of Root-Juice™, Acti-Vera™ or Alg-A-Mic™ in the feeding water after you've put it in Light-Mix®.

VEGETATIVE PHASE**

1

Your seedling is now about 10-15 cm. high and has 2-4 leaves.

2

If you want to switch to All-Mix®: this is the time to replant!

3

In the last week of the vegetative phase, you can start with Bio-Grow®, 2ml per liter for Light-Mix® and 1ml per liter for All-Mix®.

4

Water your plants 1-3 times per week. Remember: a bit less water is always better than too much.

FLOWERING PHASE

1

Use Bio-Grow®, Bio-Bloom™ and Top-Max™ as indicated in our nutrient schedule.

2

Use Biobizz® nutrients every time you water the plants, up to 1-2 weeks before harvest.

TIP! Indoor crops develop best under constant climate conditions: 18°-25°C, at 60% humidity.

TIP! To check if your plant is thirsty: put your finger in the soil, if it sticks to your finger, you don't have to water yet. If you want to know exactly when you should water: buy a soil humidity meter.

FLUSHING

1

In this period, you feed with just water. Stop using Biobizz® products.

2

If you choose one week of flushing: water your plants till run-off, 3 times a week. You are basically washing the soil.

3

If you choose two weeks of flushing: water with the normal amount of water, like you've done in the weeks before, 2-3 times a week.

4

The leaves of your plants might turn yellow. This is normal, so don't panic.
